

FOR IMMEDIATE RELEASE

DRAXXIN® (TULATHROMYCIN) INJECTABLE SOLUTION IS APPROVED IN CANADA FOR THE TREATMENT OF OVINE FOOT ROT ASSOCIATED WITH *DICHELOBACTER NODOSUS*

Montreal – September 7, 2018. Zoetis Canada announces that Draxxin® (tulathromycin) Injectable Solution has received approval from Health Canada for the treatment of ovine foot rot associated with *Dichelobacter nodosus* when systematic treatment is required due to the presence of active lesions.

Foot rot, which is caused when the bacteria *Dichelobacter nodosus* infects the horn of the sheep's hoof,¹ is highly contagious and has serious implications, such as lameness and reduced production.

DRAXXIN®

Draxxin® Injectable Solution is a ready-to-use sterile parenteral preparation containing tulathromycin, a semi-synthetic macrolide antibiotic. Each mL of Draxxin® Injectable Solution contains 100 mg of tulathromycin.

Draxxin® has a long track record of safety and efficacy across species: in cattle, as an antibiotic approved for the treatment of bovine respiratory disease (BRD), infectious bovine keratoconjunctivitis (IBK) and foot rot; in swine, as an antibiotic for the treatment of swine respiratory disease (SRD); and now in sheep for the treatment of foot rot.

Draxxin® is available in Canada in five formats (20mL, 50mL, 100 mL, 250 mL, 500 mL) to meet the needs of all operations.

AN EXPANDING PORTFOLIO OF PRODUCTS TO SUPPORT OVINE HEALTH

With its broad portfolio of products—which include the recent additions of the Glanvac® 6 vaccine and Startect™ parasiticide—Zoetis is committed to the health of Canada's sheep flocks.

ABOUT ZOETIS

Zoetis is a global animal health company dedicated to supporting customers and their businesses in ever better ways. Building on 60 years of experience, we deliver quality medicines and vaccines, complemented by diagnostic product and genetics tests and supported by a range of services.
