

CONCERNED ABOUT INTERNAL PARASITES IN YOUR SHEEP?

Dear Valued Customer,

Controlling internal parasites in sheep can be a moving target but now **STARTECT™** is changing the rules.

STARTECT is:

- A highly effective, short-acting oral sheep drench designed to optimize flock productivity.
- The first new class of drench to be approved in combination – a combination developed to protect against parasite resistance.

STARTECT treats and controls a broad range of adult and immature worms, including the “barber pole worm”, *Haemonchus contortus*, and other important gastro intestinal nematode parasites such as *Teladorsagia* and *Trichostrongylus*. **STARTECT** has also demonstrated high efficacy (greater than 95%) against certain worms known to be resistant to other dewormers.

To maximize this “built-in” protection against resistance, **STARTECT** should be used in conjunction with other strategies to control internal parasites.

Talk to your veterinarian to find out how STARTECT can improve sustainability in your flock.
